

# Project Controlling in Automotive

---

## **Solution for the Management of complex product development processes and project controlling for a global utility vehicle manufacturer**

### **Customer:**

Commercial vehicle manufacturer (DAX 30)

### **Our role:**

Process consulting and optimization, overall responsibility for the design and implementation of the solution, supporting the customer in change management and training.

### **Solution description:**

The solution consists of several components and supports the planning, management and controlling of product development processes in vehicle development throughout all phases. These include milestone planning, project controlling as well as several other solution areas.

### **Deployment:**

In the final stage, the solution is used by more than 500 employees from various departments and is one of the central, enterprise-wide used platforms.

### **Customer benefit:**

Significantly increased process efficiency, reduction of conflicts and planning errors in the product development process, improvements in project controlling and cost management.
